

Service Manual

KOC-1B5K

Microwave Oven, Convection & Grill

SEP. 2008

PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

- (a) Do not operate or allow the oven to be operated with the door open.
- (b) Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs if necessary: (1) Interlock operation, (2) Proper door closing, (3) Seal and sealing surfaces (arcing, wear, and other damage), (4) Damage to or loosening of hinges and latches (5) Evidence of dropping or abuse.
- (c) Before turning on power to the microwave oven for any service test or inspection within the microwave generating compartments, check the magnetron, wave guide or transmission line, and cavity for proper alignment, integrity, and connections.
- (d) Any defective or misadjusted components in the interlock, monitor, door seal and microwave generation and transmission systems shall be repaired, replaced, or adjusted by procedures described in this manual before the oven is released to the owner.
- (e) A microwave leakage check to verify compliance with the Federal performance standard should be performed on each oven prior to release to the owner.

1. PROPER USE AND SERVICE PRECAUTIONS

CAUTION

This device is to be Serviced only by Properly Qualified Service Personnel. Consult the Service Manual for Proper Service Procedures to Assure Continued Safety Operation and for Precautions to be Taken to Avoid Possible Exposure to Excessive Microwave Energy.

1. FOR SAFE OPERATION

Damage that allows the microwave energy (that cooks or heats the food) to escape will result in poor cooking and may cause serious bodily injury to the operator.

IF ANY OF THE FOLLOWING CONDITIONS EXIST, OPERATOR MUST NOT USE THE APPLIANCE. (Only a trained service personnel should make repairs.)

- 1) A broken door hinge.
- 2) A broken door viewing screen.
- 3) A broken front panel, oven cavity.
- 4) A loosened door lock.
- 5) A broken door lock.

The door gasket plate and oven cavity surface should be kept clean.

No grease, soil or spatter should be allowed to build up on these surfaces or inside the oven.

DO NOT ATTEMPT TO OPERATE THIS APPLIANCE WITH THE DOOR OPEN.

The microwave oven has concealed switches to make sure the power is turned off when the door is opened.

Do not attempt to defeat them.

DO NOT ATTEMPT TO SERVICE THIS APPLIANCE UNTIL YOU HAVE READ THIS SERVICE MANUAL.

2. FOR SAFE SERVICE PROCEDURES.

1. If the oven is operative prior to servicing, a microwave emission check should be performed prior to servicing the oven.
2. If any certified oven unit is found to servicing, a microwave emission check should be performed prior to servicing the oven.
 - (a) inform the manufacturer, importer or assembler,
 - (b) repair the unit at no cost to the owner,
 - (c) attempt to ascertain the cause of the excessive leakage,
 - (d) tell the owner of the unit not to use the unit until the oven has been brought into compliance.
3. If the oven operates with the door open, the service person should tell the user not to operate the oven and contact the manufacturer immediately.

CAUTION

MICROWAVE RADIATION

PERSONNEL SHOULD NOT BE EXPOSED TO THE MICROWAVE ENERGY WHICH MAY RADIATE FROM THE MAGNETRON OR OTHER MICROWAVE GENERATING DEVICE IF IT IS IMPROPERLY USED OR CONNECTED. ALL INPUT AND OUTPUT MICROWAVE CONNECTIONS. WAVEGUIDES FLANGES AND GASKETS MUST BE SECURED. NEVER OPERATE THE DEVICE WITHOUT A MICROWAVE ENERGY ABSORBING LOAD ATTACHED. NEVER LOOK INTO AN OPEN WAVEGUIDE OR ANTENNA WHILE THE DEVICE IS ENERGIZED.

2. SPECIFICATIONS

MODEL		KOC-1B0K9A27,1B4K9A27	KOC-1B5K9A27
POWER SUPPLY		120V AC 60Hz, SINGLE PHASE WITH GROUNDING	
MICROWAVE	POWER CONSUMPTION	1500W	
	OUT POWER	1000W	
	FREQUENCY	2450 MHz	
GRILL POWER CONSUMPTION		1600W	
CONVECTION POWER CONSUMPTION		1600W	
COMBINATION HEATING POWER CONSUMPTION		1600W	
OUTSIDE DIMENSIONS (WXHxD)		560X543X344mm (22.0X21.3X13.5inch)	560X537.5X344mm (22.0X21.2X13.5inch)
CAVITY DIMENSIONS (WXHxD)		368.5X376.5X246mm 14.5X14.8X9.7inch	
NET WEIGHT		Approx. 20.5kg(45.2 lbs.)	
TIMER		60 minutes	
POWER SELECTIONS		10 level	

* Specifications are subject to change without notice.

3. EXTERNAL VIEW

3-1. OUTER DIMENSION - KOC-1B5K

2. FEATURE DIAGRAM

1. DOOR SEAL

Door seal maintains the microwave energy within the oven cavity and prevents microwave leakage.

2. DOOR HOOK

When the door is closed, it will automatically lock shut. If door is opened while oven is operating, the magnetron will immediately stop operating.

3. DOOR VIEWING SCREEN

Allows viewing of food. The screen is designed so that light can pass through, but not the microwave.

4. TOP HEATER

Turns on when convection, grill and combi cooking is selected.

5. OVEN LAMP

Automatically turns on during oven operating.

6. SAFETY INTERLOCK SYSTEM

7. CONTROL PANEL

8. TURNTABLE TRAY

Rotates during cooking and ensure even distribution of Microwaves. It can also be used as a cooking utensil.

9. OVEN FRONT PLATE

10. COUPLER

This fits over the shaft in the center of the ovens cavity floor. This is to remain in the oven for all cooking.

11. ROLLER GUIDE

This must always be used for cooking together with the turntable tray.

12. METAL RACK

13. CONVECTION OUTLET & FAN

14. UNDER HEATER

4. INSTALLATION

1. Steady, flat location

This microwave oven should be set on a steady, flat surface.

This microwave oven is designed for counter top use only.

2. Leave space behind and side

All air vents should be kept a clearance. If all vents are covered during operation, the oven may overheat and, eventually, cause failure.

3. Away from Radio and TV sets

Poor television reception and radio interference may result if the oven is located close to a TV, Radio, antenna or feeder and so on.

Position the oven as far from them as possible.

4. Away from heating appliances and water taps

Keep the oven away from hot air, steam or splash when choosing a place to position it, or the insulation might be adversely affected and breakdowns occur.

5. Power supply

- Check your local power source. This microwave oven requires a current of approximately 13 amperes, 120V, 60Hz.
- Power supply cord is about 0.8 meters long.
- 1. A short power-supply cord is provided to reduce the risks resulting from becoming entangled in or tripping over a longer cord.
- 2. Longer cord sets or extension cords are available and may be used if care is exercised in their use.
- 3. If a long cord or extension cord is used:
 - 1) The marked electrical rating of the cord set or extension cord should be at least as great as the electrical rating of the appliance.
 - 2) The extension cord must be a grounding type 3-wire cord.
 - 3) The longer cord should be arranged so that it will not drape over the counter top or tabletop where it can be pulled on by children or tripped over unintentionally.

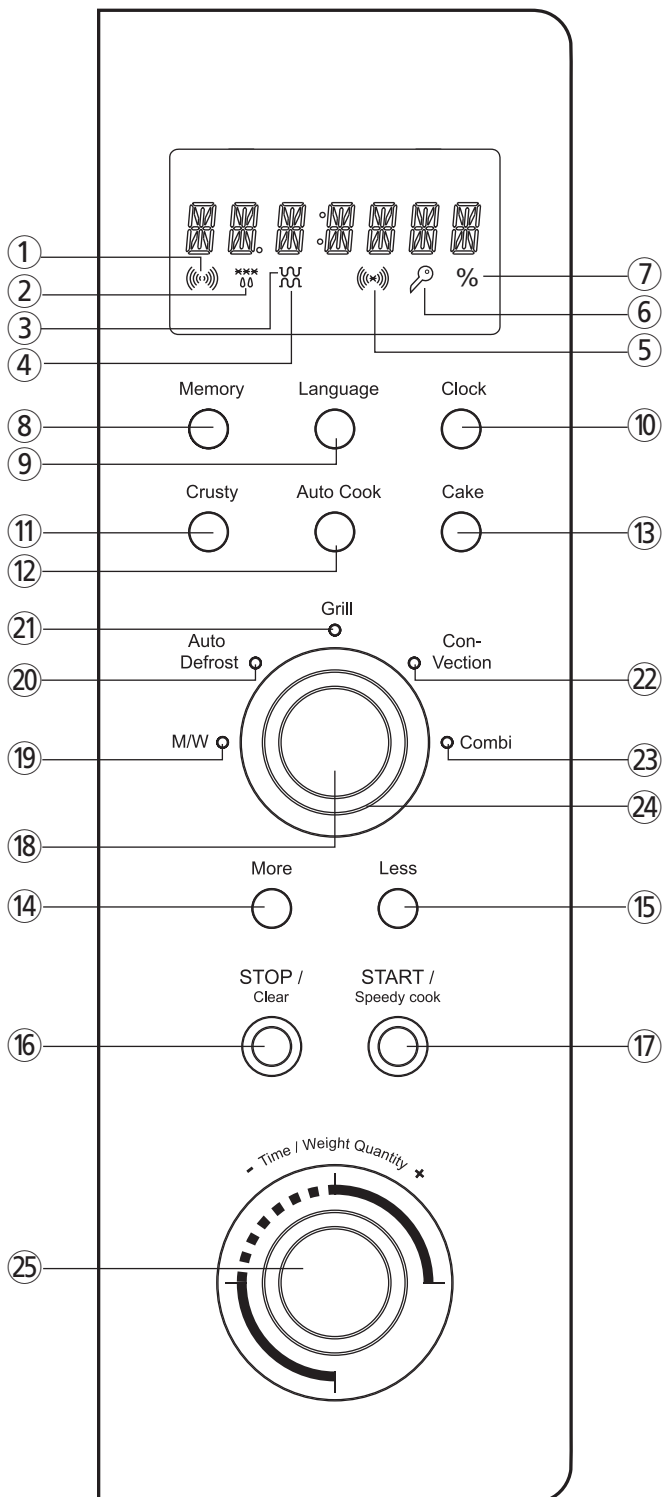

7. Examine the oven after unpacking for any damage such as:

A misaligned door, broken door or a dent in cavity.

If any of the above are visible, DO NOT INSTALL, and notify dealer immediately.

5. CONTROL PANEL

- KOC-1B5K

DISPLAY WINDOW (INDICATOR)

1. **MICROWAVE** indicator: show microwave cook in progress.
2. **DEFROST** indicator: show defrost cook in progress.
3. **GRILL**(upper grill heater) indicator: show grill cook in progress.
4. **GRILL**(lower grill heater) indicator: show grill cook in progress.
5. **CONVECTION** indicator: show convection cook in progress.
6. **CHILD LOCK** indicator.
7. **%** percentage microwave power level indicator.

BUTTONS

8. **Memory** : Use to set favorite cooking mode.
9. **Language** : Press to select the language.
10. **Clock** : Use to set the clock.
11. **Crusty** : Press to select crusty menu.
12. **Auto cook** : Press to select auto cook menu.
13. **Cake** : Press to select cake menu.
14. **More** : Use to add time to cooking.
15. **Less** : Use to reduce time from cooking.
16. **Stop/Clear** : Press once to stop a program, and twice to cancel a program.
17. **Start/Speedy Cook** : Press to start a program, also for speedy cook (each press adds 30 seconds to microwave cooking time).
18. **Dial knob button** : Use to decided the selected mode.

DISPLAY LED LAMP

19. **M/W LED LAMP**: show microwave cook in progress.
20. **AUTODEFROST LED LAMP**: show auto defrost cook in progress.
21. **GRILL LED LAMP**: show grill cook in progress.
22. **Convection LED LAMP**: show convection cook in progress.
23. **COMBI LED LAMP**: show combi cook in progress.

DIAL KNOB

24. **Top Dial Knob** : Use to set temperature, power level and quantity.
25. **Bottom Dial Knob** : Use to set time or weight.

6. DISASSEMBLY AND ASSEMBLY

- Cautions to be observed when trouble shooting.

Unlike many other appliances, the microwave oven is high-voltage, high-current equipment. It is completely safe during normal operation. However, carelessness in servicing the oven can result in an electric shock or possible danger from a short circuit. You are asked to observe the following precautions carefully.

1. Always remove the power plug from the outlet before servicing.
2. Use an insulated screwdriver and wear rubber gloves when servicing the high voltage side.
3. Discharge the high voltage capacitor before touching any oven components or wiring.

(1) Check the grounding.

Do not operate on a two-wire extension cord.

The microwave oven is designed to be used while grounded.

It is imperative, therefore, to make sure it is grounded properly before beginning repair work.

(2) Warning about the electric charge in the high voltage capacitor.

For about 30 seconds after the operation has stopped, electric charge remains in the high voltage capacitor.

When replacing or checking parts, short between oven chassis and the negative high terminal of the high voltage capacitor by using a properly insulated screwdriver to discharge.

4. When the 15A fuse is blown out due to the operation of the monitor switch; replace primary interlock switch, secondary interlock switch and interlock monitor switch.
5. After repair or replacement of parts, make sure that the screws are properly tightened, and all electrical connections are tightened.
6. Do not operate without cabinet.

CAUTION : Service personnel should remove their watches whenever working close to or replacing the magnetron.

WARNING : When servicing the appliance, take care when touching or replacing high potential parts because of electrical shock or exposing microwave. These parts are as follows - HV Transformer, Magnetron, HV Capacitor, HV Diode.

1. To remove cabinet

- 1) Remove four screws on cabinet back.
- 2) Push the cabinet backward.

2. To remove guide wind assembly

- 1) Remove two screws which secure the stopper hinge top.
- 2) Remove the door assembly from top plate of cavity.
- 3) Reverse the above for assembly.

NOTE: After replacting the door assembly, perform a check of correct alignment with the hinge and cavity front plate.

3. To remove door parts.

- KOC-1B5K

A12	3511618600	DECORATOR BADGE	NI 70MM	1	

-
- (1) Remove the gasket door(A10) from door plate.
 - (2) Remove door plate(A07) from door frame.
 - (3) Remove two screws (A11) from door frame.
 - (4) Remove the door handle (A01) and handle supporter (A02) from door frame.
 - (5) Remove two screws (A04) from door frame.
 - (6) Remove barrier screen *O sealing AS (A05) from door frame.
 - (7) Remove the stopper hinge top(A06) from door plate.
 - (8) Remove the spring(A09) and the hook(A08).
 - (9) Reverse the above steps for reassembly.

4. Method to reduce the gap between the door seal and the oven front surface.

- (1) To reduce gap located on part 'A'.
 - Loosen two screws on stopper hinge top, and then push the door to contact the door seal to oven front surface.
 - Tighten two screws.
- (2) To reduce gap located on part 'B'.
 - Loosen two screws on stopper hinge under, and then push the door to contact the door seal to oven front surface.
 - Tighten two screws.

NOTE : A small gap may be acceptable if the microwave leakage does not exceed 4mW/cm².

5 To remove control panel parts.

-KOC-1B5K

REF NO.	PART CODE	PART NAME	DESCRIPTION	Q'TY	REMARK
B01	3515501820	WINDOW DISPLAY	PMMA	1	
B02	3516724160	C-PANEL	ABS SG-0760D, SG-175	1	
B03	3516908390	BUTTON FUNCTION-A	ABS SG-175 SG-0760D	1	
B04	3516908490	BUTTON FUNCTION-B	ABS SG-175 SG-0760D	1	
B05	3513406090	KNOB VOLUME	ABS SG-175 SG-0760D	2	
B06	3511605170	DECORATOR RING	ABS SG-175, SG-0760D COATING	2	
B07	3513004800	LED HOLDER	PP	1	
B08	7121301011	SCREW TAPPING	T2S PAN 3X10 MFZN	8	
B09	PKMPMSAD50	MAIN PCB ASS'Y	KOC-1B5K9S	1	
B10	7122401211	SCREW TAPPING	T2S TRS 4X12 MFZN	5	

- (1) Remove five screws (B10) and eight screws (B08) which secure the control panel.
- (2) Pull out the Main PCB assembly(B09).
- (3) Pull out the Knob volume(B05) from the Main PCB assembly.
- (4) Pull out the decorator ring (B06) from knob volumes.
- (5) Pull out two buttons from the control panel.
- (6) Pull out the LED HOLDER (B07) from the main PCB assembly.
- (7) Pull out Window display (B01) from the control panel.
- (8) Reverse the above steps for reassembly.

6. To remove high voltage capacitor.

- 1) Remove a screw which secure the grounding ring terminal of the H.V. diode and the capacitor holder.
- 2) Remove the H.V. diode from the capacitor holder.
- 3) Reverse the above steps for reassembly.

◆ High voltage circuit wiring

7. To remove magnetron.

- 1) Remove a screw which secure the magnetron.
- 2) Remove the magnetron.
- 3) Reverse the above steps for reassembly.

CAUTION : Never install the magnetron without the metallic gasket plate which is packed with each magnetron to prevent microwave leakage. Whenever repair work is carried out on magnetron, check the microwave leakage. It shall not exceed $4\text{mW}/\text{cm}^2$ for a fully assembled oven with door normally closed.

8. To remove wind guide assembly.

- 1) Remove a screw which secure the wind guide assembly.
- 2) Draw forward the wind guide assembly
- 3) Pull the fan from the motor shaft.
- 4) Remove two screws which secure the motor shaded pole.
- 5) Remove the motor shaded pole.
- 6) Reverse the above steps for reassembly.

9. To remove H.V.transformer.

- 1) Remove four screws holding the H.V.transformer.
- 2) Remove the H.V.transformer.
- 3) Reverse the above steps for reassembly.

10. To remove Top heater assembly parts.

REF NO.	PART CODE	PART NAME	DESCRIPTION	Q'TY	REMARK

- 1) Cut the Motor syncro cover parts from the base plate.
- 2) Remove a screw and pull out Motor syncro.
- 3) Remove a screw ① which secures Under heater assembly.
- 4) Remove a screw ⑤.
- 5) Pull out Heater *U ④ from Cover heater *u ②.
- 6) Reverse the above steps for reassembly.

7. INTERLOCK MECHANISM AND ADJUSTMENT

The door lock mechanism is a device which has been specially designed to completely eliminate microwave radiation when the door is opened during operation, and thus to perfectly prevent the danger resulting from the leakage of microwave.

(1) Primary interlock switch

When the door is closed, the hook locks the oven door. If the door is not closed properly, the oven will not operate.

When the door is closed, the hook pushes the button of the microswitch. Then the button of the primary interlock switch bring it under ON condition.

(2) Secondary interlock switch and interlock monitor switch

When the door is closed, the hook pushes the lock lever downward. The lock lever presses the button of the interlock monitor switch to bring it under OFF condition and presses the button of the secondary interlock switch to bring it under ON condition.

ADJUSTMENT :

Interlock monitor switch

When the door is closed, the interlock monitor switch should be opened before other switches are closed.

When the door is opened, the interlock monitor switch should be closed after other switches are opened.

(3) Adjustment steps

- Loosen the one mounting screw.
- Adjust interlock switch assembly position.
- Make sure that lock lever moves smoothly after adjustment is completed.
- Tighten completely two mounting screws.

NOTE :

Microwave emission test should be performed after adjusting interlock mechanism.

If the microwave emission exceed 4mW/cm², readjust interlock mechanism.

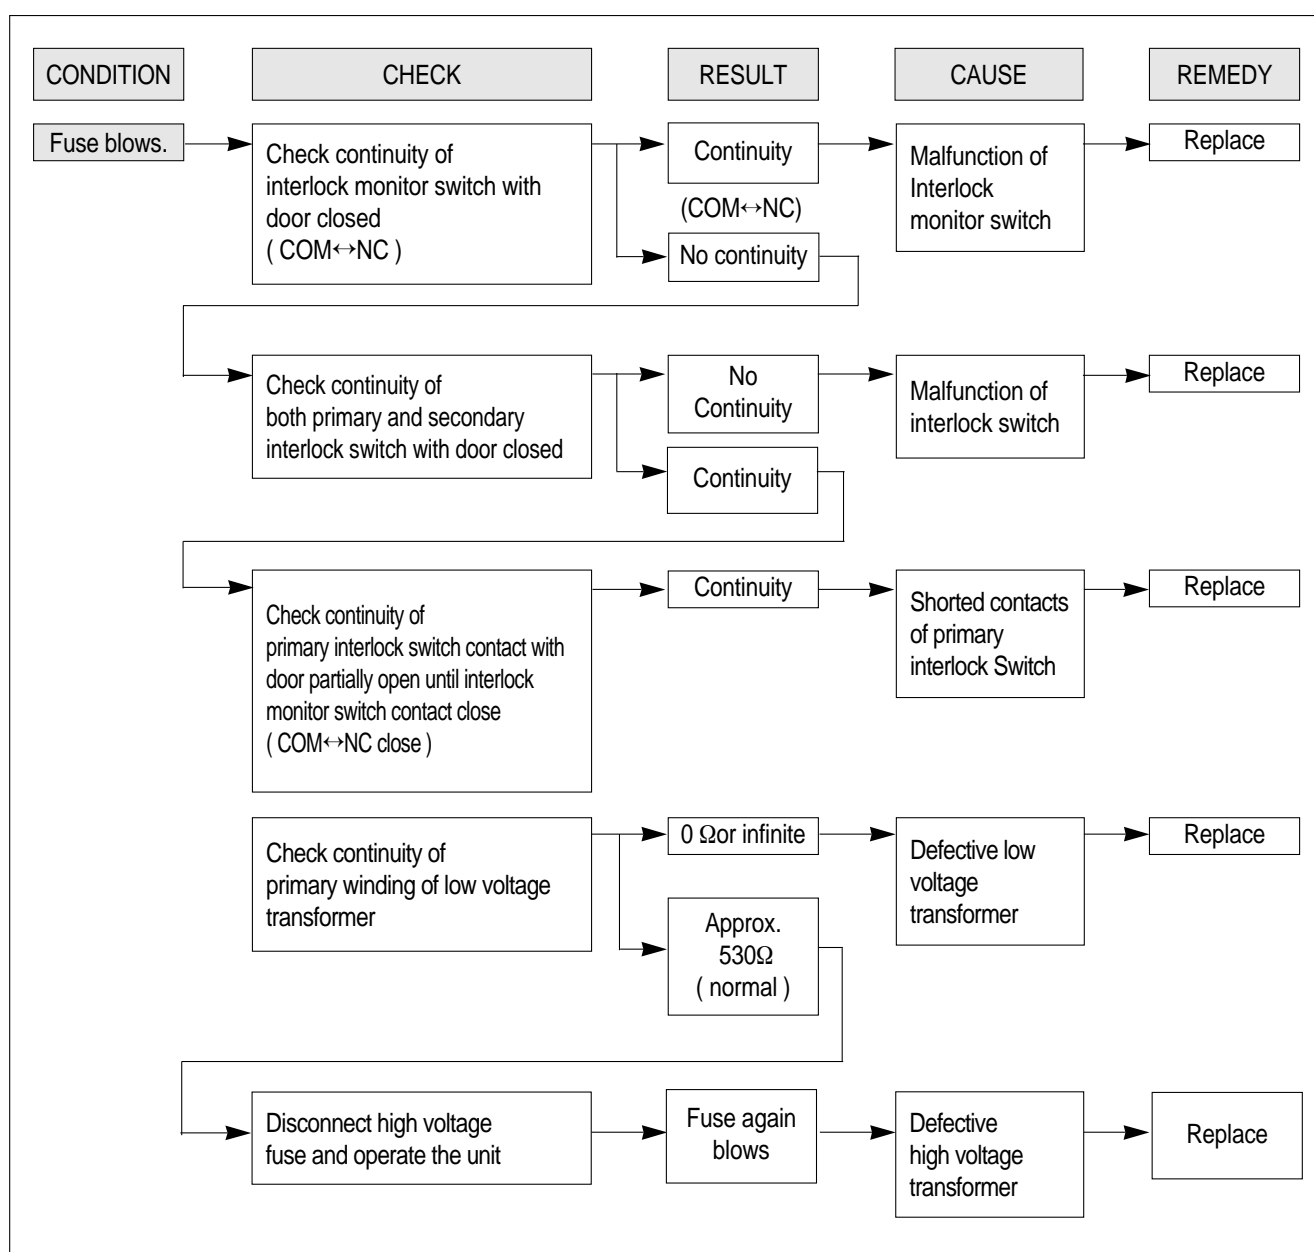

8. TROUBLE SHOOTING GUIDE

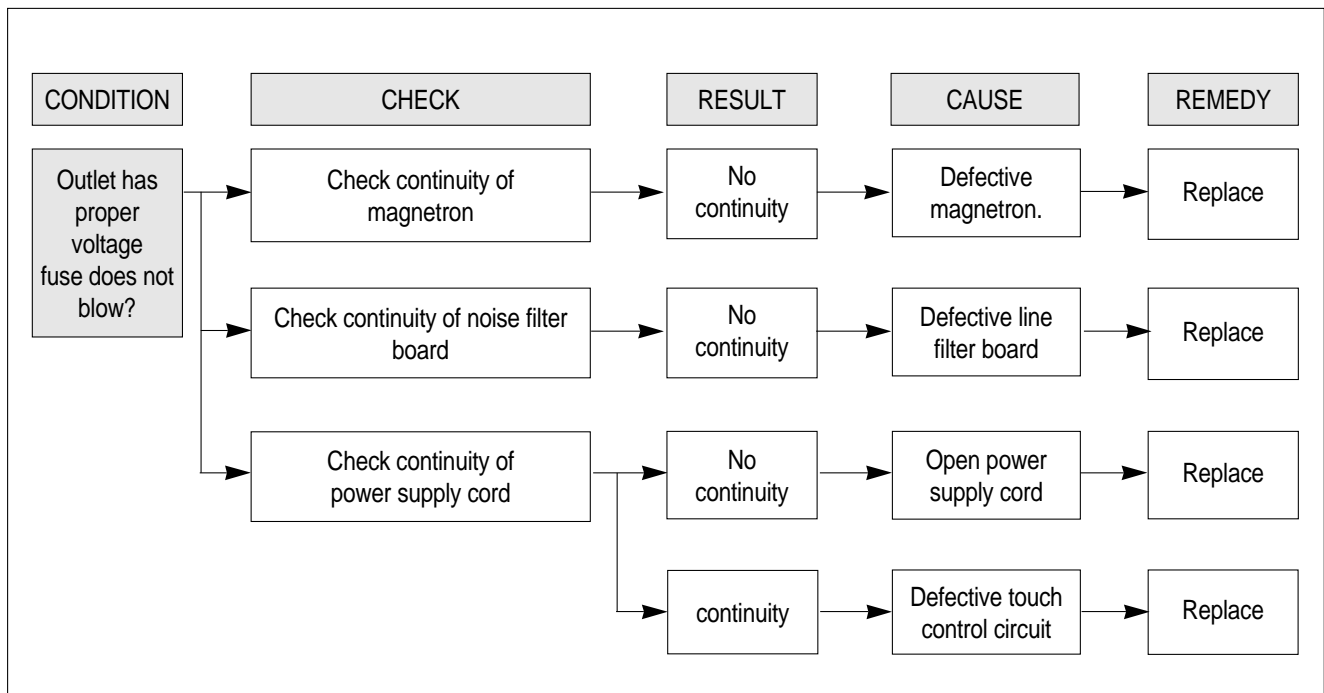

Following the procedure below to check if the oven is defective or not.

- 1) Check grounding before trouble checking.
- 2) Be careful of the high voltage circuit.
- 3) Discharge the high voltage capacitor.
- 4) When checking the continuity of the switches, fuse or high voltage tranformer, disconnect one load wire from these parts and check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.

NOTE : When electric parts are checked, be sure the power cord is not inserted the wall outlet.
Check wire harness, wiring and connection of the terminals and power cord before check the parts listed below.

(TROUBLE 1) Oven does not operate at all : any inputs can not be accepted.

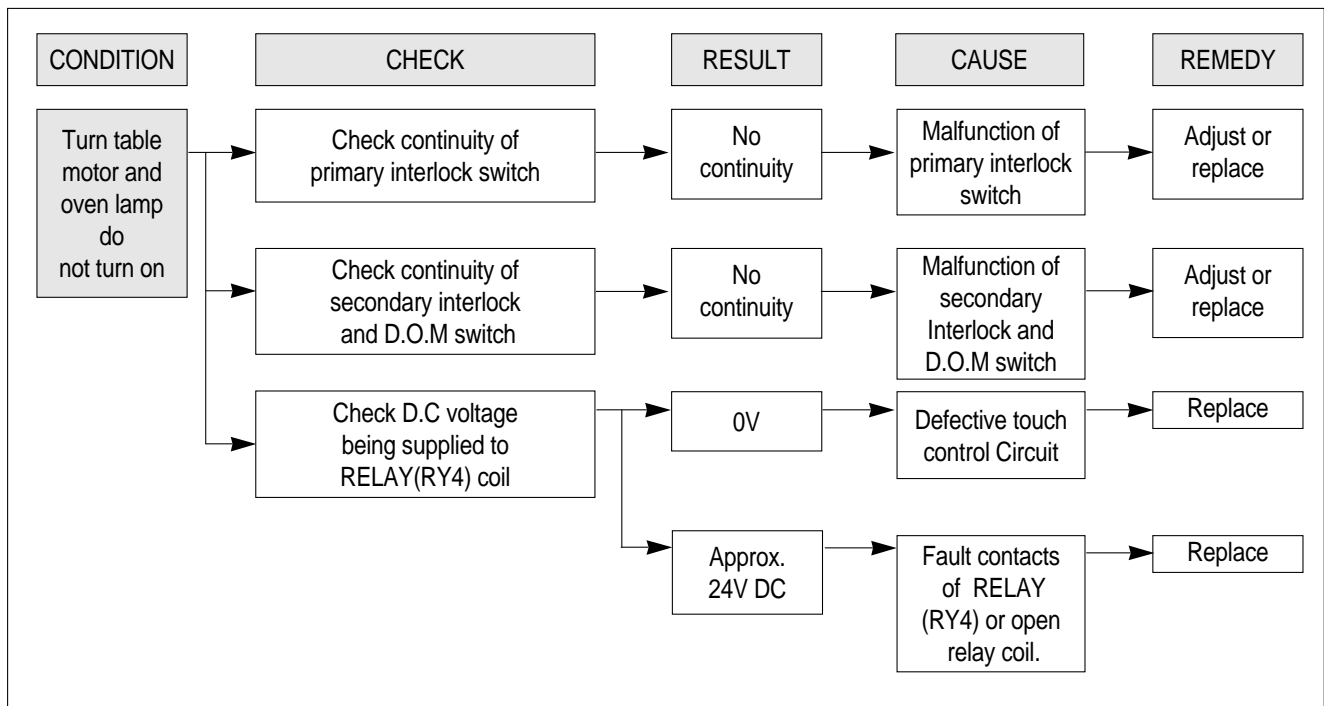

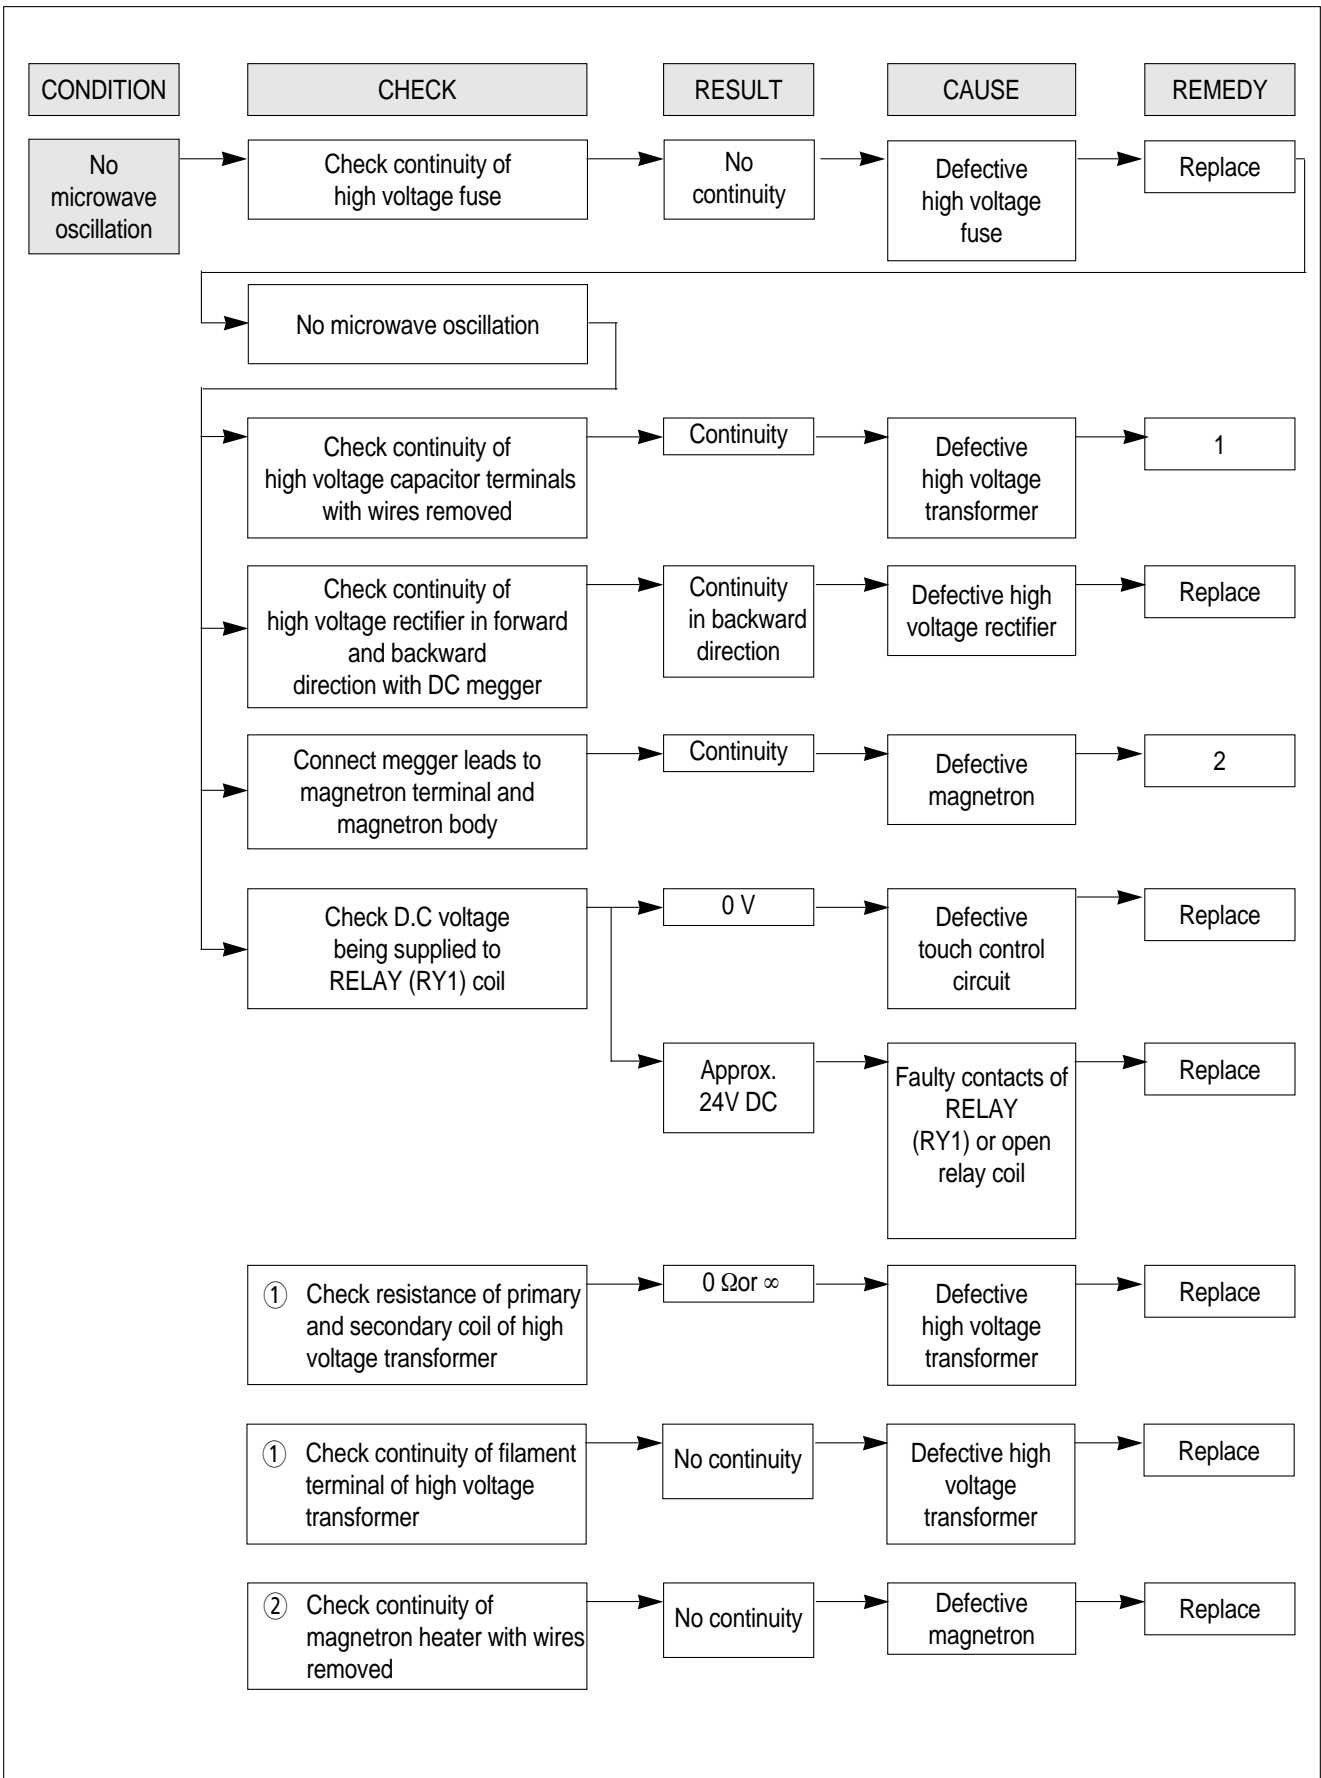

NOTE : All these switches must be replaced at the same time, please refer to (7.Interlock mechanism and adjust) for adjustment instructions

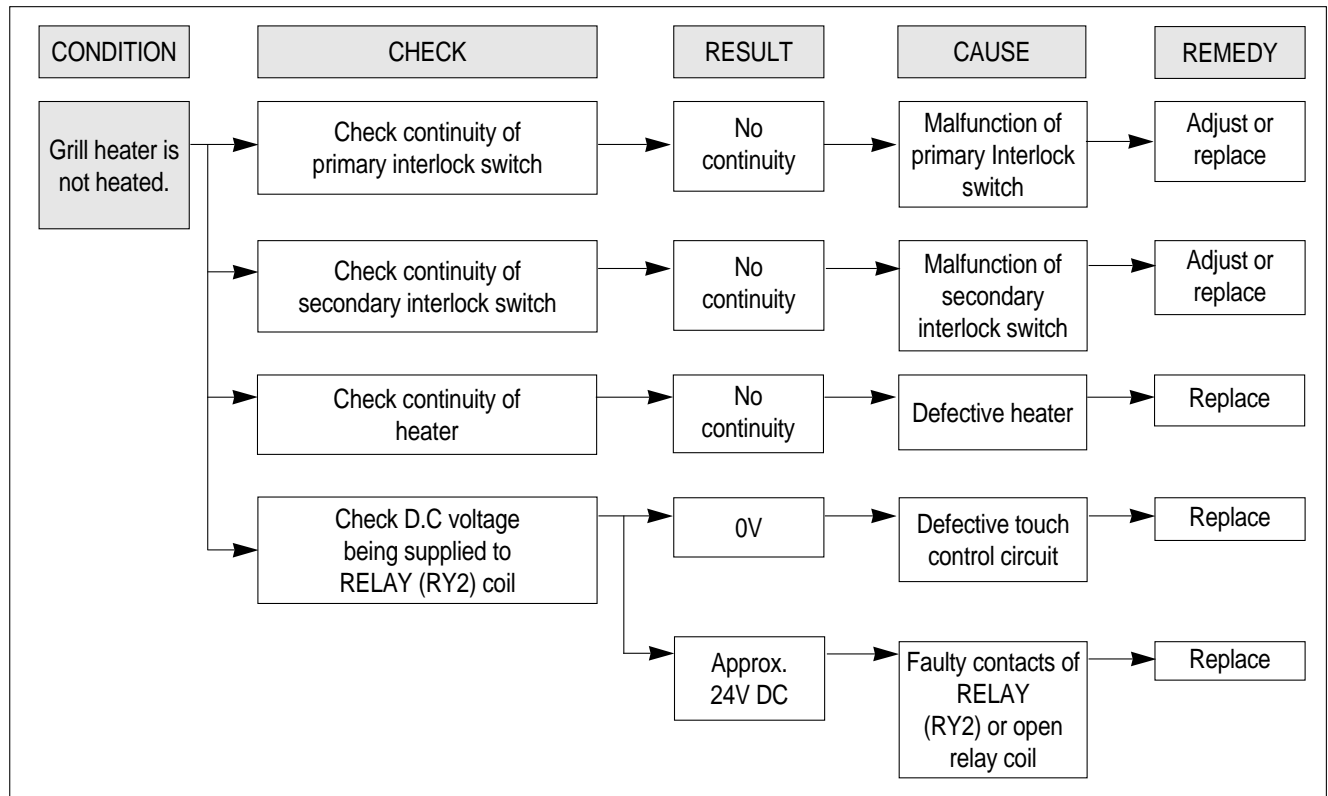

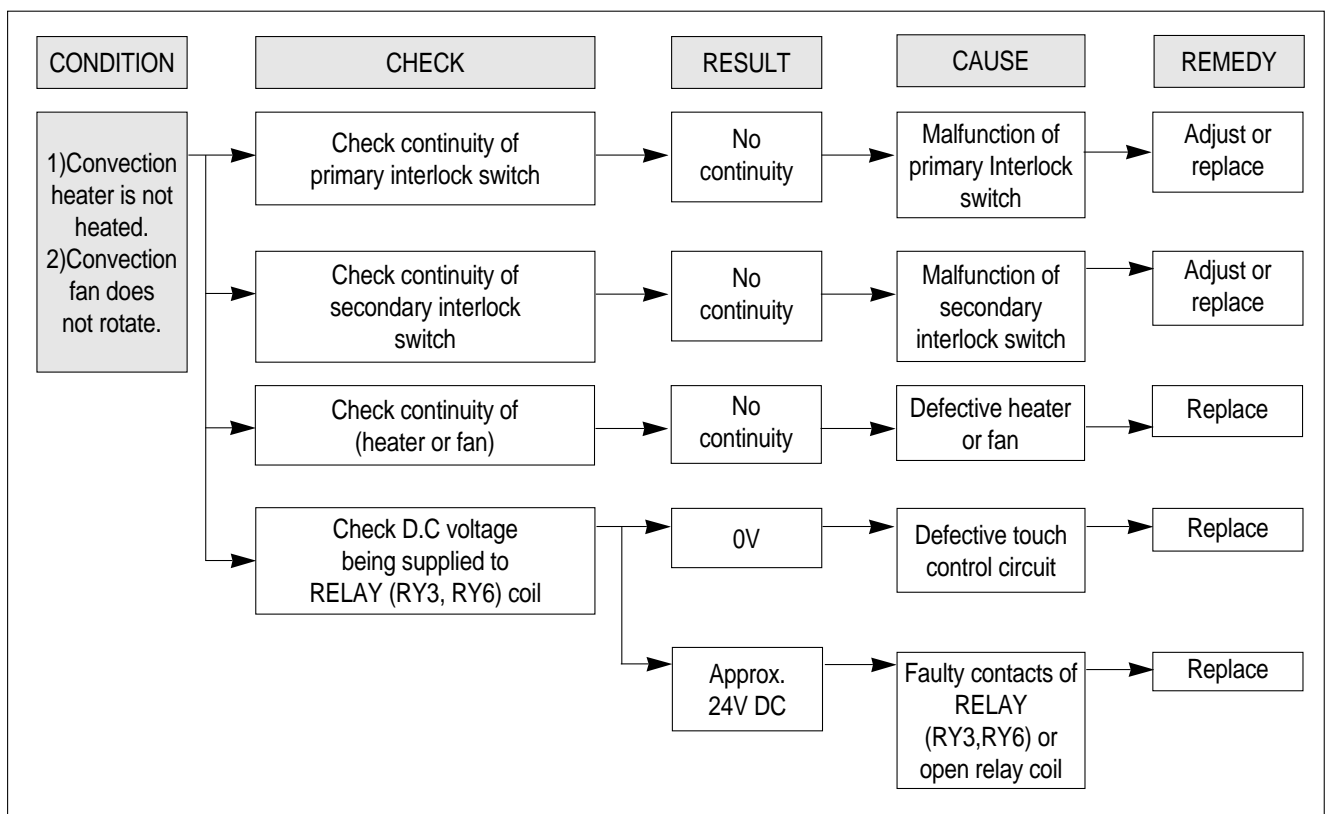

(TROUBLE 2)

Display shows all figures selected, but oven does not start cooking, even though desired program and time are set and start button is tapped.

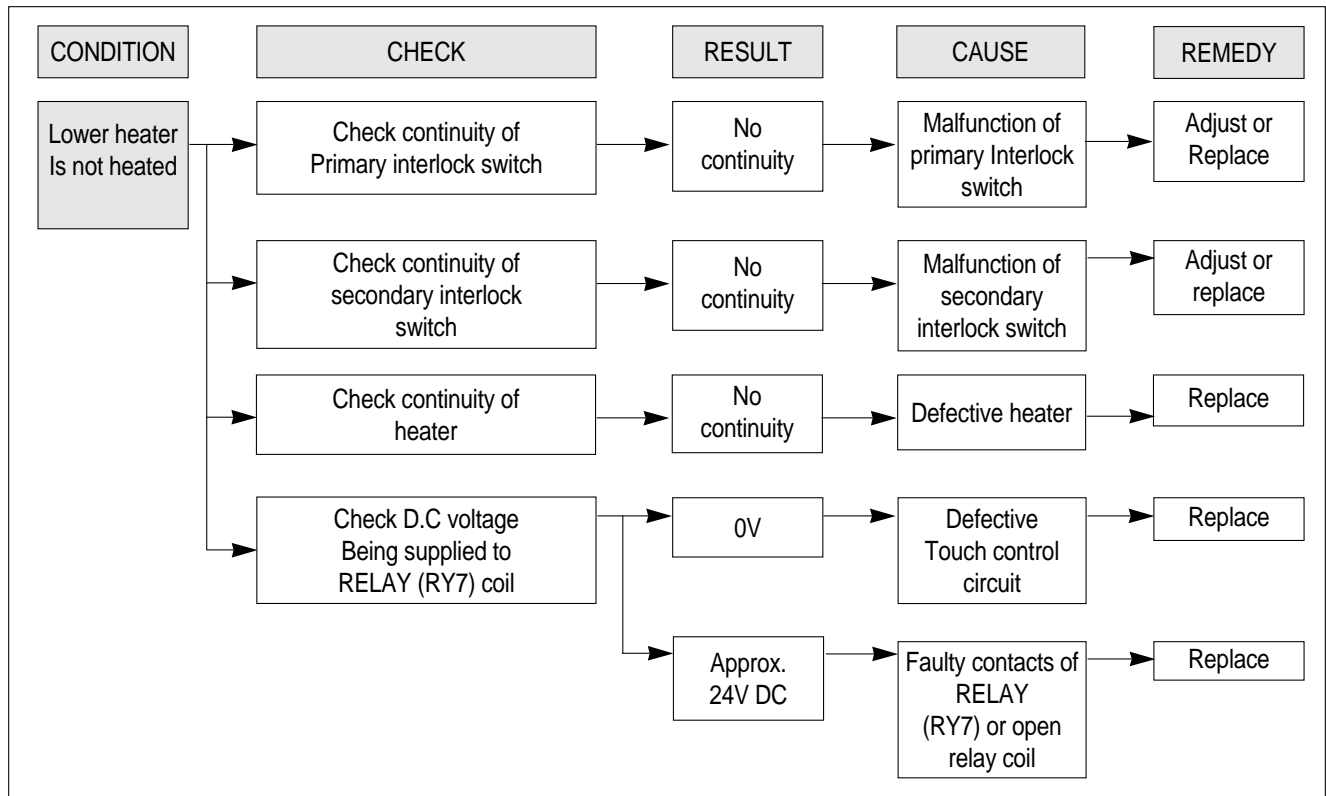

TROUBLE 3) No microwave oscillation even though fan motor rotates.

(TROUBLE 4)**Grill heater (upper heater) is not heated; food will not become hot.****(TROUBLE 5)****1) Convection heater is not heated; food will not become hot.****2) Convection fan motor does not rotate.**

(TROUBLE 6)

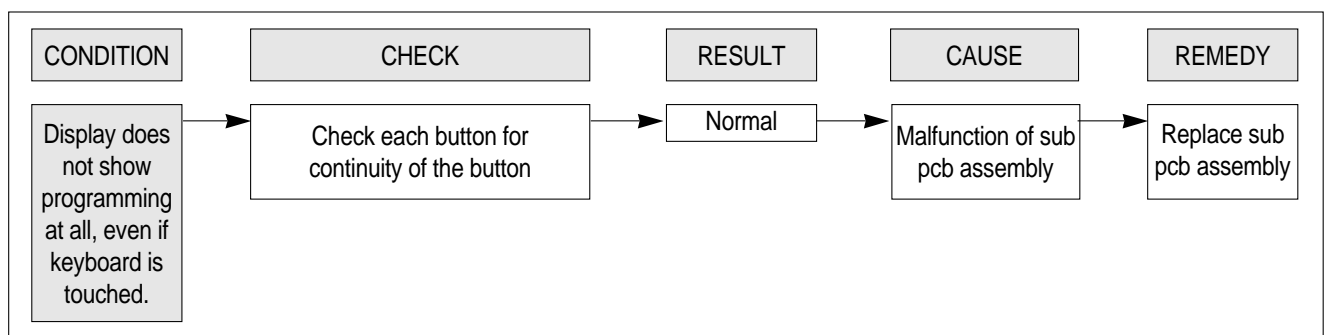

Lower heater is not heated; food will not become hot.

(TROUBLE 7)

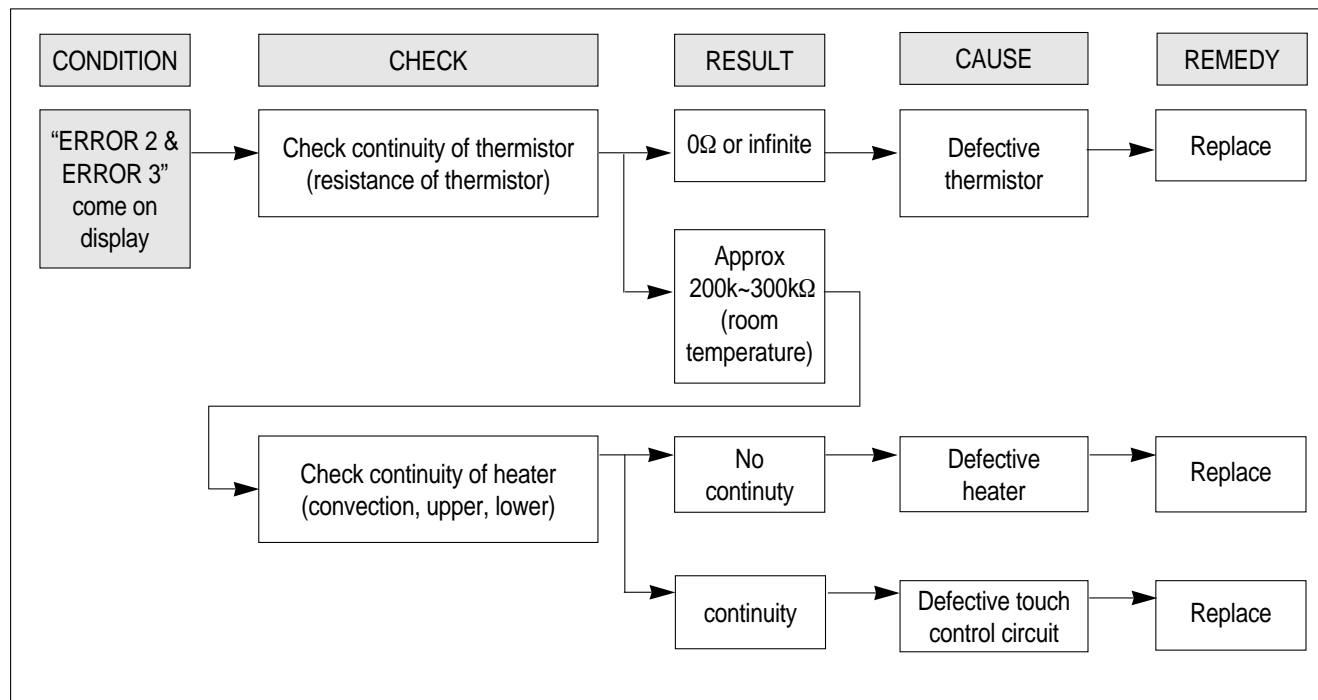

The following visual conditions indicate a probable defective touch control Circuit or button P.C.B. assembly

- Incomplete segments.
 - segment missing
 - partial segments missing
 - digit flickering other than normal fluorescent slight flickering
- A distinct change in the brightness of one or more numbers exists in the display
- One or more digits in the display are not on when they should be.
- Display does not count down or up with time cooking or clock operation.
- Oven is programmable and cooks normally but no display shows.
- Display obviously jumps in time while counting down.
- Display counts down noticeably too fast while cooking.
- Display does not show the time of day when clear button is touched.

(TROUBLE 8)

When "ERROR 2 ERROR 3" come on display.

9. MEASUREMENT AND TEST

1. MEASUREMENT OF THE MICROWAVE POWER OUTPUT

Microwave output power can be checked by indirectly measuring the temperature rise of a certain amount of water exposed to the microwave as directed below.

PROCEDURE

1. A cylindrical container of borosilicate glass is used for the test. It has a maximum thickness of 3mm, an external diameter of approximately 190mm and a height of approximately 90mm.
The mass of the container is determined.
2. At the start of the test, the oven and the empty container are at ambient temperature. Water having an initial temperature of $10^{\circ}\text{C} \pm 1^{\circ}\text{C}$ is used for the test. The water temperature is measured immediately before it is poured into the container.
3. A quantity of 1000g 5g of water is added to the container and its actual mass obtained.
The container is then immediately placed in the centre of the oven shelf, which is in its lowest normal position. The oven is operated and the time for the water temperature to attain $20^{\circ}\text{C} \pm 2^{\circ}\text{C}$ is measured. The oven is then switched off and the final water temperature is measured within 60s.

NOTE 1 - The water stirred is before its temperature is measured.

NOTE 2 - Stirring and measuring devices are to have a low heat capacity.

4. The microwave power output is calculated from the formula

$$P = 4,187 \cdot m_w (T_2 - T_1) + 0.55 \cdot m_c (T_2 - T_0) / t$$

where

P is the microwave power output, in watts ;

m_w is the mass of the water, in grams ;

m_c is the mass of the container, in grams ;

T_0 is ambient temperature, in degrees Celsius ;

T_1 is the initial temperature of the water, in degree Celsius ;

T_2 is the final temperature of the water, in degrees Celsius ;

t is the heating time, in seconds, excluding the magnetron filament heating-up time.

* The microwave power output is stated in watts, rounded off to the nearest 50W

CAUTION

1. Water load should be measured exactly to 1 liter.
2. Input power voltage should be exactly specified voltage (Refer to SPECIFICATIONS).
3. Ambient temperature should be $20 \pm 2^{\circ}\text{C}$ ($68 \pm 3.6^{\circ}\text{F}$)

* Heating time for power output: ($T_2 = T_0$)

A (second)	70	64	60	56	52	49	47	44	42	40	38
B (W)	600	650	700	750	800	850	900	950	1000	1050	1100

2. MICROWAVE RADIATION TEST

WARNING

1. Make sure to check the microwave leakage before and after repair of adjustment.
2. Always start measuring of an unknown field to assure safety for operating personnel from microwave energy.
3. Do not place your hands into any suspected microwave radiation field unless the safe density level is known.
4. Care should be taken not to place the eyes in direct line with the source of microwave energy.
5. Slowly approach the unit under test until the radiometer reads an appreciable microwave leakage from the unit under the test.

PROCEDURE

1. Prepare Microwave Energy Survey Meter, 600cc glass beaker, and glass thermometer 100°C (212°F).
2. Pour 275cc \pm 15cc of tap water initially at 20 \pm 5°C (68 \pm 9°F) in the 600 cc glass beaker with an inside diameter of approx. 95 mm(3.5 in.).
3. Place it at the center of the tray and set it in a cavity.
4. Close the door and operate the oven.
5. Measure the leakage by using Microwave Energy Survey Meter with dual ranges, set to 2450MHz.
 - 1) Measured radiation leakage must not exceed the value prescribed below. Leakage for a fully assembled oven with door normally closed must be less than 4mW/Cm².
 - 2) When measuring the leakage, always use the 5 cm (2 in.) space cone with probe. Hold the probe perpendicular to the cabinet and door. Place the space cone of the probe on the door, cabinet, door seem, door viewing screen, the exhaust air vents and the suction air vents.
 - 3) Measuring should be in a counter-clockwise direction at a rate of 1 in./sec. If the leakage of the cabinet door seem is unknown, move the probe more slowly.
 - 4) When measuring near a corner of the door, keep the probe perpendicular to the areas making sure the probe end at the base of the cone does not get closer than 2 in. from any metal. If it does not, erroneous reading may result.

3. COMPONENT TEST PROCEDURE

- High voltage is present at the high voltage terminal of the high voltage transformer during any cooking cycle.
- It is neither necessary nor advisable to attempt measurement of the high voltage.
- Before touching any oven components or wiring, always unplug the oven from its power source and discharge the capacitor.

1. High voltage transformer

- 1) Remove connections from the transformer terminals and check continuity.
- 2) Normal readings should be as follows :
 - Secondary winding ... Approx. 100 Ω
 - Filament winding ... Approx. 0 Ω
 - Primary winding ... Approx. 1.2 Ω

2. High voltage capacitor

- 1) Check continuity of capacitor with meter on the highest OHM scale.
- 2) A normal capacitor will show continuity for a short time, and then indicate 10M Ω once the capacitor charged.
- 3) A shorted capacitor will show continuous continuity.
- 4) An open capacitor will show constant 10M Ω
- 5) Resistance between each terminal and chassis should be infinite.

3. High voltage diode

- 1) Isolate the diode from the circuit by disconnecting the leads.
- 2) With the ohmmeter set on the highest resistance scale measure the resistance across the diode terminals. Reverse the meter leads and again observe the resistance reading. Meter with 6V, 9V or higher voltage batteries should be used to check the front-back resistance of the diode, otherwise an infinite resistance may be read in both directions. A normal diode's resistance will be infinite in one direction and several hundred k Ω in the other direction.

4. Magnetron

For complete magnetron diagnosis, refer to "Measurement of the Microwave Power Output." Continuity checks can only indicate an open filament or a shorted magnetron. To diagnose for an open filament or a shorted magnetron,

- 1) Isolate magnetron from the circuit by disconnecting the leads.
- 2) A continuity check across magnetron filament terminals should indicate 0.1 Ω or less.
- 3) A continuity check between each filament terminal and magnetron case should read open.

5. Fuse

If the fuse in the primary and monitor switch circuit is blown when the door is opened, check the primary and monitor switch before replacing the blown fuse. In case the fuse is blown by an improper switch operation, replace the defective switch and fuse at the same time. Replace just the fuse if the switches operate normally.

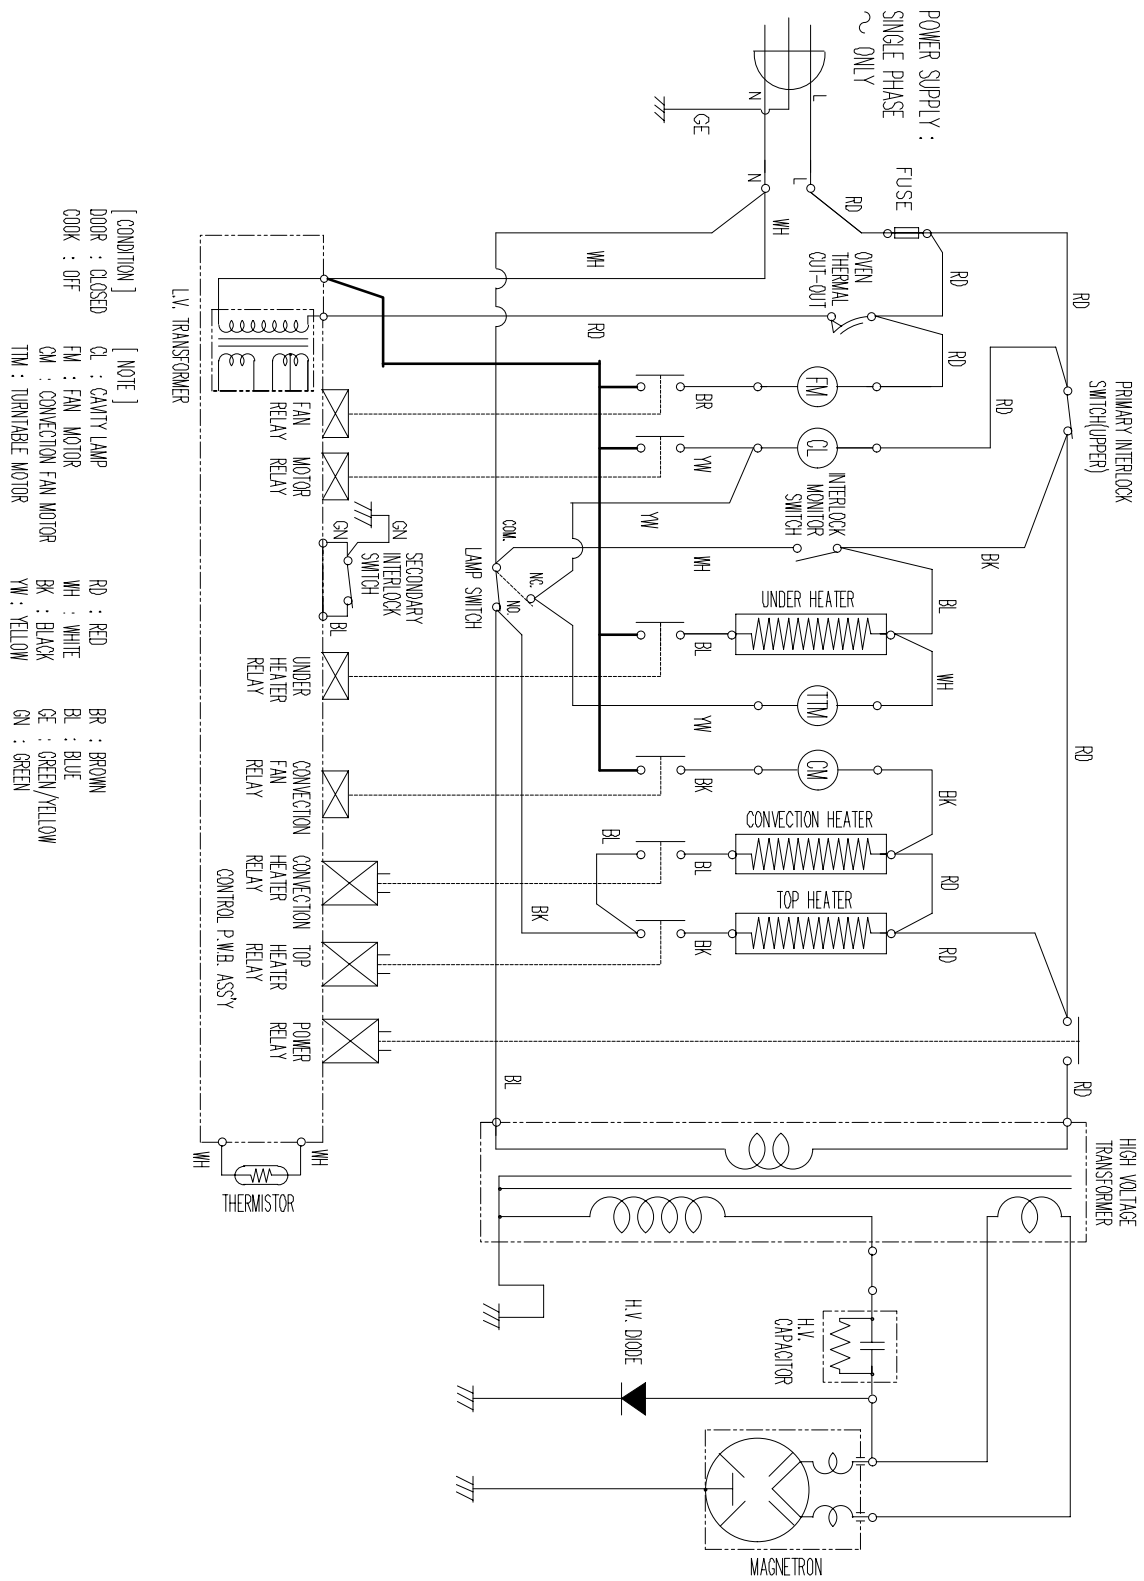

6. Interlock switches

- 1) You can test continuity of safety interlock and monitor switch by using ohmmeter.
- 2) The switch operation is checked by zero/unlimited.
 - The meter should indicate zero resistance.
- 3) The sequence of check is interlock monitor switch, primary and secondary interlock switches check.

12. PRINTED CIRCUIT BOARD (KOC-1B5K)

CIRCUIT CHECK PROCEDURE

1. Low voltage transformer check

The low voltage transformer is located on the P.C.B.

Measuring condition: Input voltage: 120V / Frequency: 60Hz

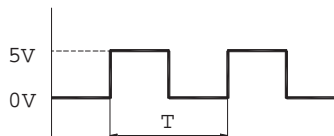

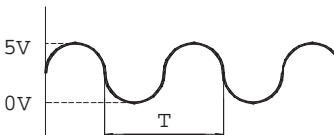

Terminal	Voltage(olad)	Voltage(no load)
6-7	AC 17.0 V	AC 19.9 V
8-9	AC 1.3 V	AC 1.6 V
9-10	AC 1.3 V	AC 1.6 V

NOTE

1. Secondary side voltage of the low voltage transformer changes in proportion to fluctuation of power source voltage.
2. The allowable tolerance of the secondary voltage is within $\pm 5\%$ of nominal voltage.

2. Voltage Check

- Key check point

NO	CHECK POINT	REMARK
1	IC1 PIN 63, 64	5VDC \pm 5%
2	IC1 PIN 38	 <p>T : 16.67 ms(60Hz)</p>
3	IC1 PIN 33 OR 34	 <p>T : 250 ns(4MHz)</p>

- Check method

NO	MEASURE POINT	WAVE FORM	REMEDY	REMARK
1	A	DC 5V \pm 5%	Replace ZD2, EC1	NO LOAD
2	B	DC 24V \pm 20%	Replace D20-23, EC6	NO LOAD

NOTE: Each measure point must be measured with GND points.

: The marks of the above corresponding voltage (+5V, +24V) are written on the PCB.

3. Case of no microwave oscillation

- 1) When touching M/W button, oven lamp turns on and Fan motor and turntable rotate, and cook indicator in display comes on.

*Cause: **RELAY 1** does not operate.

STATE	POINT A	POINT B
RELAY 1 ON	+5V DC	GND
RELAY 1 OFF	GND	+24V DC

- 2) When touching M/W button, oven lamp does not turn on and turntable does not rotate but cook indicator in display comes on.

*Cause: **RELAY 1** does not operate.

STATE	POINT A	POINT B
RELAY 4 ON	+5V DC	GND
RELAY 4 OFF	GND	+24V DC

- 3) When touching M/W button, fan motor does not rotate but turntable rotates, oven lamp turns on and cook indicator in display comes on.

*Cause: **RELAY 5** does not operate.

STATE	POINT A	POINT B
RELAY 5 ON	+5V DC	GND
RELAY 5 OFF	GND	+24V DC

4. Case of no heating of upper grill

When touching GRILL1 & COMBI button, oven lamp turns on and Fan motor and turntable rotate, and cook indicator in display comes on.

*Cause: **RELAY 2** does not operate.

STATE	POINT A	POINT B
RELAY 2 ON	+5V DC	GND
RELAY 2 OFF	GND	+24V DC

5. Case of no heating of lower grill

When touching GRILL2 & COMBI button, oven lamp turns on and Fan motor and turntable rotate and cook indicator in display comes on.

*Cause: **RELAY 7** does not operate.

STATE	POINT A	POINT B
RELAY 7 ON	+5V DC	GND
RELAY 7 OFF	GND	+24V DC

6. Case of no heating of convection grill

When touching CONVECTION button, oven lamp turns on and Fan motor and turntable rotate and cook indicator in display comes on.

*Cause: **RELAY 3** does not operate.

STATE	POINT A	POINT B
RELAY 3 ON	+5V DC	GND
RELAY 3 OFF	GND	+24V DC

7. Case of no stopping of the count down timer

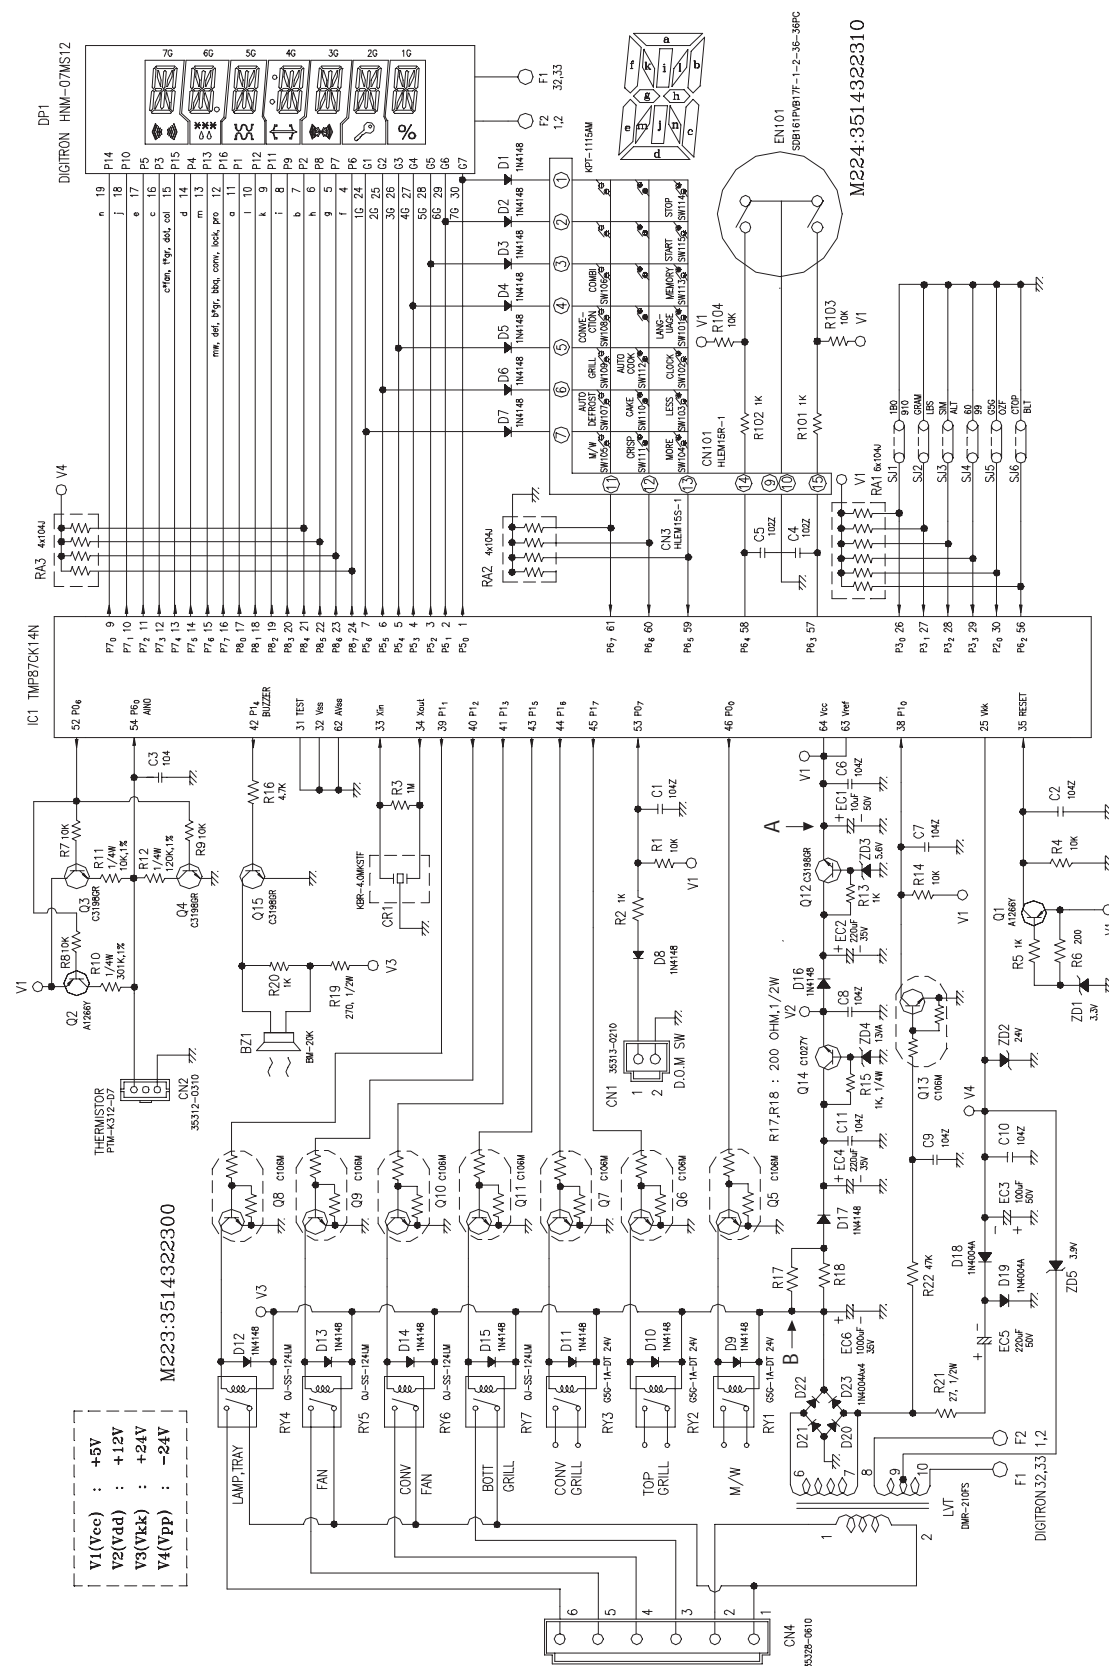

When the door is opened during operation, the count down timer does not stop.

STATE \ POINT	A	B
DOOR OPEN	OPEN	+5V DC
DOOR CLOSED	CLOSE	GND

CHECK NO	METHOD	REMEDY
1	Check the stage(ON,OFF) of the door open monitor switch by resistance measurement.	Replace door open monitor switch.

PCB ASS'Y PART LIST

NO	NAME	SYMBOL	SPECIFICATION	PART CODE	Q'TY
1	PCB MAIN	M231	95.5 X 197	3514322720	1
2	PCB SUB	M232	88 X 197	3514322730	1
3	BUZZER	BZ1	BM-20K	3515600100	1
4	CAPACITOR CERAMIC	C1~C4,C7~C12	104 50V Z AXIAL	CCZF1H104Z	10
5	CAPACITOR CERAMIC	C5,C6	102 50V Z AXIAL	CCZB1H102K	2
6	CAPACITOR ELECTRO	EC1	50V RS 10uF	CEXE1H100A	1
7	CAPACITOR ELECTRO	EC2,EC4	35V RSS 220uF	CEXF1V221V	2
8	CAPACITOR ELECTRO	EC6	35V RSS 1000uF	CEXF1V102V	1
9	CAPACITOR ELECTRO	EC5	50V RSS 220uF	CEXF1H221V	1
10	CAPACITOR ELECTRO	EC3	50V RSS 100uF	CEXF1H101V	1
11	CONNECTOR FILM	CN3	HLEM15S-1	4CW215SBD0	1
12	CONNECTOR WAFER	CN1	35313-0210	30166M7020	1
13	CONNECTOR WAFER	CN2	35312-0310	30166M5030	1
14	CONNECTOR WAFER	CN4	35328-0610	4CW3061MX0	1
15	DIODE SWITCHING	D1~D17	1N4148 AUTO 52mm	DZN4148---	17
16	DIODE RECTIFYING	D18~D23	1N4004A AUTO 52mm	DZN4004A--	6
17	DIODE ZENER	ZD1	UZ -3.3BSB	DZUZ3R3BSB	1
